DIGIMIC DCen Weaver

Software for controlling multiple DCen central units
Article no.: S4.1360

Description

DCen Weaver is a software of the Brähler Systems DIGIMIC family. The software allows you to combine several DCen central units into one system and manage them simultaneously. Microphone management modes and priority setting will work across all connected DCens, e.g. to mute delegates microphones at all DCens simultaneously.

The DCen Weaver software automatically detects all central units in the network and links them according to your wishes to form an overall concept. When the program is started again, all selected DCens are searched for and linked again. Repeated linking of the system is no longer necessary.

The DCen Weaver software is clearly laid out and user-friendly and can be operated almost intuitively.

The DCen Weaver software is free of charge and can be used with any DCen, DCen mini, 8 or 32 channel systems.

Features

- Combine multiple DCens to operate as one integrated system
- Different microphone modes:
  - 4 automatic operating modes
  - 4 voice activation modes (VOX)
  - Manual mode
  - Priority control of the session chair
  - VIP mode
  - Request to speak management
- Name management of the conference topics
- Identification by means of RFID card
- Adjustable number of simultaneously active microphones
- Access via mouse, keyboard and/or touch screen
- More than 1000 delegate units in one system

System requirements

- PC with Windows 7/ 8/ 10 (32/64 bit)
- LAN or WLAN connection

Supported central units:
- DCen MkII
  Article no.: 05.0055
- DCen mini MkII
  Article no.: 05.0430
