

# DIGIMIC DIGIVOTE2 basic interactive Voting software for PowerPoint

Article no.: S4.1180

Wie schätzen Sie die wirtschaftliche  
Situation der nächsten Monate ein?

## Description

DIGIVOTE2 basic interactive is an add-in for Microsoft PowerPoint. DIGIVOTE2 enables you to conduct interactive opinion polls and voting procedures directly from your PowerPoint presentation.

With the help of a DIGIVOTE2 wizard, you can create question and result slides within your presentation without having to do without the formatting features of PowerPoint. During your presentation, DIGIVOTE2 basic interactive automatically displays toolbars with which you can start polls. DIGIVOTE2 collects the results and displays them immediately after the voting within your PowerPoint presentation.

DIGIVOTE2 can be used with the Lean+ modular 6+1 units, the CMic/CMic ID units and the Chairman versions. All inputs are processed by the DIGIMIC central units - evaluated by DIGIVOTE2.

## Properties

- Different types of voting
  - Standard
  - Parliamentary
  - Attendance check
