

DIGIMIC MicControl2

DIGIMIC microphone control software

Article no.: S4.1325

Example application

Description

MicControl2 is a flexible control software for the DIGIMIC conference system from Brähler Systems. Powerful graphics allow you to design sophisticated geographical layouts. By integrating images, you create conferences based on real room models. Operation is almost self-explanatory and intuitive.

With the MicControl2 software, you control the delegate units within your system, specify the name of each delegate and get the best possible overview of the status and arrangement of the microphones.

In combination with the free DCen Weaver software, MicControl2 can control more than 1000 delegate units on multiple DCens. Up to 2 screens are supported. Operation via touch screen is possible.

Features

- Display of the active speakers and the list of speakers
- Freely configurable screen display
- Display of the workspace across multiple monitors
- Powerful, virtual microphone control panels can be created in a short time
- Intuitive operation
- Customised display option
- By creating different sized or different coloured microphone buttons, for example, the status of different delegates in the conference can be highlighted
- Multiple instances of MicControl2 can be used within the same system to provide simultaneous access to different operators.

System requirements

- PC with Windows 7/ 8/ 10 (32/64 bit)
- LAN or WLAN connection
- MicControl2 requires the free software DCen Weaver
Article no.: S4.1360

Supported central units:

- DCen MkII
Article no.: 05.0055
- DCen mini MkII
Article no.: 05.0430
