

The EWW32 is a high quality digital 32 channel language selector for simultaneous interpretation systems. It is connected via shielded CAT5-cable according to Brähler specification with the Power Supply Unit PSU04.

With tip-tap push-buttons, volume and channels can be selected easily and quickly. The selected channel is displayed on a high contrast backlit LC Display with very good visibility also under lower viewing angles. The big character size allows the user even over greater viewing distances to clearly read the digits.

In addition each channel selector is equipped with a self-diagnostic circuitry that shows an error indicator on the display when the signal transmission is being disturbed or interrupted.

1. **LC Display** - showing the selected channel number in two digits.
2. **Channel selector** - By pressing the push button you can change the channel:
  - + push to increase channel
  - push to decrease channel
3. **Volume control** - By pressing the push button you change volume:
  - + push to increase volume
  - push to decrease volume
4. **Connector** for the head phone (3,5 mm jack)

Adjust the volume to a suitable level.  
High sound pressure levels might damage your hearing.
