**brählerOS** Audio Event Player
smart conferencing for *DIGIMIC*
Sound file player

Article no.: OS.0720

application example

Description

AudioEventPlayer is part of the smart conferencing solution and is based on brählerOS. The system offers you various possibilities to control and manage your conferences.

The AudioEventPlayer makes it possible to highlight certain events during a conference with acoustic notifications. The end of speaking time, pauses or the beginning of a vote, for example, can be made clear by audio signals.

The AudioEventPlayer module can only be used in combination with the brählerOS and 3rd Party Interface software.

AudioEventPlayer runs on any Windows PC/laptop or on the brählerOS server itself.

Features

- Smart Conferencing

- Audio signals amplify interactions

- Different signals for different events

- Acoustic support for people with impaired vision

System requirements

Required software
- Single Conference license, Article no.: OS.0100
  or
