# **brähler**OS Interpretation Management smart Conferencing for *DIGIMIC*

Article no.: OS.0400

application example

Description

Interpretation Management is part of the smart Conferencing solution for your DIGIMIC system. The software is based on brählerOS and gives you new possibilities to control and monitor the DDol32 interpreter unit.

With Interpretation Management you define the language tables and the assignment of the interpreter unit. In addition, the status of each individual interpreter is displayed. The special functions of the DIGIMIC interpreter consoles such as "Help" or "Slow" are also supported.

The Interpretation Management module can only be used in combination with the brählerOS software.

Features

- Management and control of all interpreter consoles

- Setting up the language tables

- Configuration of the interpreter unit assignment

- Individual adjustment of the "channel occupied" behavior

- Support of special functions such as "Help" or "Slow".
