**brählerOS** VideoStream

smart Conferencing for *DIGIMIC*

Video stream on your multimedia unit

Article no.: OS.0550

application example

Description

VideoStream is part of the smart Conferencing solution and is based on brählerOS. The system offers you various possibilities to extend, control and manage your conferences in a multimedia way.

With VideoStream from BrählerOS it is possible to feed different videos into the network and stream them. Each delegate has the possibility to decide for himself which stream he wants to watch, or a stream is sent centrally controlled to all units.

The VideoStream module can only be used on multimedia units of the SMic series in combination with the brählerOS software.

Features

- Smart Conferencing

- Multiple H.264 Full-HD video streams can be fed in parallel

- Each delegate can choose from several streams or a video can be streamed centrally to all units.

- Easy to use
