

DIGIMIC CamControl2

Camera system all-in-one solution

Article no.: S4.1370

Description

With the DIGIMIC camera system you have always set the stage for your conference. Robotic PTZ cameras, Brähler CamControl2 software and a video matrix switcher guarantee the best possible images.

Our CamControl2 software controls the cameras according to the current speaker list for the currently active delegates.

In case of several simultaneous speakers, the camera image remains either on the first active speaker or switches to the newest active speaker. The cameras are always positioned before the live image is switched. Unpleasant camera movements do not occur.

The PTZ cameras make it possible to record almost all angles of a conference room. Multiple positions of different cameras can be programmed and provided with a quality level for each individual delegate. CamControl2 ensures that the next free camera with the best possible position always takes the speaker into the picture.

Features

- Robotic PTZ cameras, 3G-SDI
- Best possible image selection
- No camera movements of the live image
- Multiple cameras can be stored per seat
- Programmable home input if no speaker is active
- Seamless Switching
- Up to 16 cameras and 1 DCen control unit with 100 or more delegate units

Technical data

- Software for Windows10, 64-bit
- Network connection to DCen central control unit
- Network connection to 16x seamless SDI switcher
- Up to 16 PTZ cameras
- Up to 250 positions per camera
- Each camera position can be assigned one of 3 quality levels
- CamControl automatically selects the next free camera with the best possible quality level

System components

System software

- Brähler CamControl2 for Windows10 64bit
Article no.: S4.1370

Supported Central Control Units

- DCen
Article no.: 05.0055
- DCen mini
Article no.: 05.0430

Video components

- SDI-MS16
Video Matrix Switcher
Article no.: 07.3786
- PTZ980
3G-SDI PTZ camera
