brählerOS ConferenceOperator
smart Conferencing for *DIGIMIC*
Article no.: OS.0030
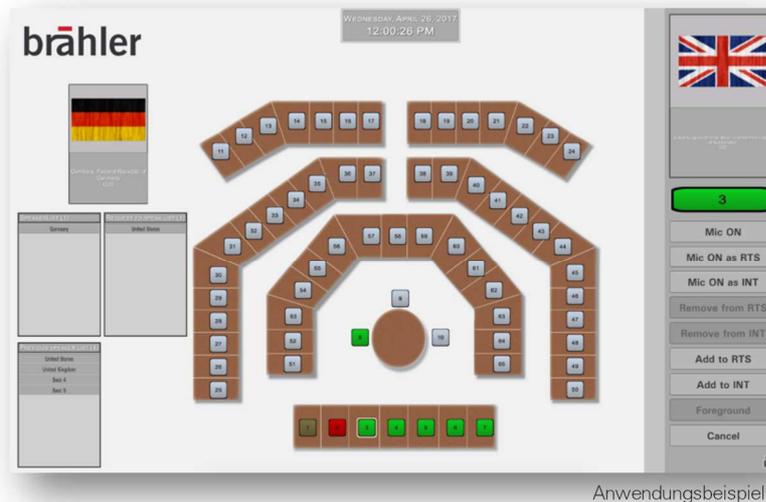

Anwendungsbeispiel

Description

The brählerOS ConferenceOperator is a flexible conference control software for the DIGIMIC conference system. ConferenceOperator is optimized for touchscreen operation, but can also be operated with keyboard and mouse, giving the conference operator intuitive control over the event. Multiple Conference-Operators can be used together in a conference system to distribute the control of different functions, if necessary.

The high performance of the graphics engine also enables sophisticated layout designs. Thus, a user interface based on a room plan can be created within minutes. This gives every user immediate intuitive control over the event.

With ConferenceOperator, you can conveniently control the connected delegate units, manage delegates and speaker lists, and get the best overview of the status of the microphones. Voting and result displays can be integrated just as easily as interpreter consoles.

Due to the intuitive design, especially developed for less technically experienced operators, the ConferenceOperator can be used without long training. The operation is almost self-explanatory.

Features

With the brählerOS ConferenceOperator you control your conference from any location within the conference network. You get a particularly secure access to the conference network, from any end device, anytime, anywhere.

- Various control lists such as active speakers, word message list, intervention list, previous speakers.

Product information

Microphone control
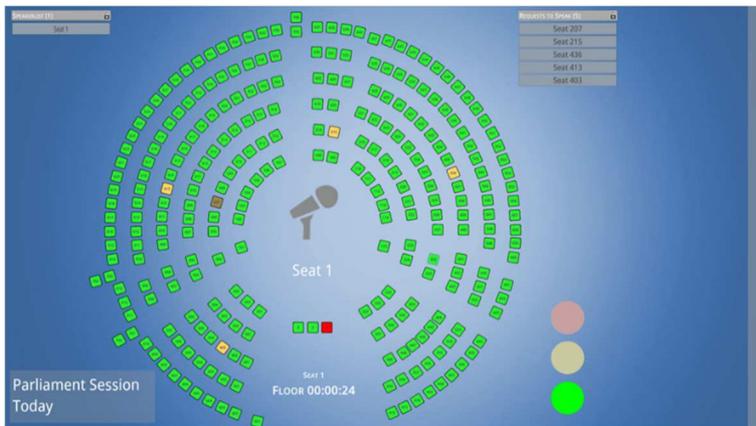

With ConferenceOperator, conference rooms can be recreated almost identically. Via the microphone control you control every single microphone from one place. In addition, among other things, presence, speaker and RTS lists create a good overview of the current events.

Application example

Voting

With ConferenceOperator, you integrate and execute voting with just a few clicks. Voting requirements or parameters can be easily and intuitively adapted to the current circumstances. Elements such as traffic lights, progress bars and timers are available to visualize the voting. Acoustic signals can also be incorporated to clarify a voting.

Application example

Result display

Results are updated live during voting or displayed after voting. Several options are available to you for viewing, such as bar charts or pie charts and tables in different variants.
